Dor I'dor From Generation to Generation: Is Your Family at Risk for a Jewish Genetic Disease?

Sponsored by:

You, your friends and family are invited to attend this important program and learn the facts about

Genetic Disease Risks in the Jewish Population

Sunday, February 21, 2010

from 2:15 pm to 4:30 pm

at

Congregation Beth Shalom

5303 Winters Chapel Road

Atlanta, GA 30360

Refreshments served (Dietary Laws Observed)

Please **RSVP** to the Hadassah office at 678-443-2961 or atlanta@hadassah.org

Speakers

- **Karen Grinzaid, MS, CGC, CCRC** is a board-certified genetic counselor and clinical/research coordinator in the Lysosomal Storage Disease Center at Emory University in the Department of Human Genetics.
- **Sharyn Lane** will share her personal experiences living with a Jewish genetic disease.
- **Rachel Schonberger, M.D.**, President of the Southeastern Region Hadassah, will highlight Hadassah's genetic advocacy and the genetic research taking place at Hadassah Hospital.

Did you know?

- *There are at least 10 genetic disorders that occur more frequently in the Jewish population than in other ethnic groups.*
- *The incidence of Tay-Sachs disease has been greatly reduced in the Jewish community through successful carrier screening; now, more non-Jewish babies are born with Tay-Sachs disease than Jewish babies.*

Donations accepted to support Hadassah Hospital's Goldyne Savad Institute of Gene Therapy and the good works of Hadassah. Come early for the silent auction.
